# What is Efincap

Today's competitive markets demand a clearly defined digital strategy. EFincap fintech experts help you to better maximize profits throughout the lifecycle of financial investments, transforming your company's bottom line. It's all about leveraging analytics processes..efincap is the affiliate of DFTC that will help you in channelising a better scope for future money. With every client engagement, our strategic advisors and engineers bring years of work across asset classes to the table.we are the potential ideal source for capital management since we have the experience of years .

Today's wealth management strategies require sophisticated investment technology and technology stacks that can keep pace with all of the players in the sector — and with the expectations of customers who are now accustomed to nimble asset management.efincap will be the source and DFTC will be the payment gateway for the same

## Fintech stability

# FINTECH

From the introduction of electronic stock trading in the 1970s to the rise of bank mainframe computers and the advent of high-frequency trading around the turn of the millennium, technology continues to transform the financial services industry.

Today, firms are applying distributed ledger technology, machine learning, artificial intelligence and other technological innovations – collectively known as “fintech” – in their never-ending pursuit to streamline processes, reduce frictions and drive down costs.

Much of the rhetoric around fintech has focussed on its potential to serve clients better and faster – by disinter mediating traditional providers and desegregating their services. While fintech undeniably holds tremendous promise in these areas, little attention has been devoted to understanding how these technological innovations could impact financial stability.

Now is the time to expand the discussion to include potential systemic risks posed by these innovations and to take a closer look at how they would affect financial stability. The fundamental challenge – for regulators and practitioners alike – is to balance fintech’s transformative potential with appropriately prudent risk management practices. And this challenge will only grow more important as the fintech industry continues to grow, fueled by the multi-billion-dollar investment flows it keeps attracting month over month.

# Assessing Fintech and Its Dimensions

To that end, DFTC has identified nine key factors to help evaluate how specific Fintech applications could affect financial stability

01

## **The extent to which Fintech companies seek to perform core banking functions:**

While Fintech companies that provide core banking functions could enhance financial stability by diversifying credit and liquidity risk, their short track record and relative lack of banking experience could also create systemic vulnerabilities in times of market stress.

02

## **The level of Fintech-related fragmentation:**

The unbundling of financial services that is associated with the rise of Fintech may benefit clients through increased competition and lower fees. At the same time, it may fragment the creation & delivery of financial services across additional providers & platforms, which could substantially exacerbate operational risk.

03

## **The impact of fintech on concentration risk:**

The growth of Fintech could lead to a small cluster of dominant players in specific market segments, which could create pockets of concentration risk.

04

## **The substitutability of Fintech services:**

Substitutability is a key concept in assessing systemic risk. Financial services that are highly substitutable (i.e., services that can easily be replaced in case a provider fails) create less systemic risk than those that are not. As such, it is important to assess to what extent a given Fintech provider could be easily substituted if it were to fail.

9  
KEY  
FACTORS

# Assessing Fintech and its dimensions

05

## **The effect of Fintech on financial interconnectedness:**

The interconnectedness of financial service providers could have a significant impact on financial stability. Therefore, it is critical to analyze how Fintech developments affect financial networks.

06

## **The degree of competition vs. cooperation between Fintech firms & incumbents:**

All else being equal, an environment where fintech companies and incumbents cooperate in mutually beneficial arrangements is more likely to promote financial stability than an environment characterized by outright competition.

07

## **The degree of reliance on automated decision-making processes:**

Over reliance on purely data-driven algorithms could lead to errors that may not have occurred in an environment that involves more human judgement calls. It may also be exceedingly difficult to discover hidden biases & address other potential flaws in decision-making algorithms that are based on artificial intelligence, given their opacity and complexity.

08

## **The sustained growth and adoption of Fintech services:**

The impact of Fintech will also depend on the extent to which the technology becomes a mainstream part of the financial ecosystem and to what extent it will ultimately be used for delivering critical financial services.

09

## **The evolution of the regulatory environment:**

Policy decisions & regulatory actions will largely determine to what extent Fintech will affect financial stability for years to come.

9  
KEY  
FACTORS

## Scope and advancement

As technological advancements propel us forward faster and faster, it becomes important for not just the engineers and developers who make them possible to understand them, but for the everyday people who use these new technologies to understand them as well. In order to achieve this, we must develop new and interactive ways of learning. It's our mission to provide individuals of all ages with the knowledge to safely navigate the fast-changing world around

## Fintech accessibility

The rapid development of Fintech is also helping to bring new opportunities to increase transparency, reduce costs and also make information more accessible. Fintech is helping to ensure that this information is at a consumer's fingertips. Fintech also helps to make some financial products more accessible for individuals who are classified as 'unbanked' – i.e. those without a current or basic bank account. Research from the University of Birmingham showed that in 2017, the number of people 'unbanked' in the UK hit an all-time low at around 1.23 million. However, this is still a large number of individuals who may not be able to access the financial help they need, without the use of Fintech

# Who we are?

**DFTC** is a value-driven global company that strives on building strong foundations and creating long relationships. The demonstrable skill is all around reflected in our work as we work carefully to guarantee that our customer needs are met. A finished straightforwardness is what our clients can anticipate when exchanging with us.

We make trading recommendations to our clients depending on the day-to-day that include multiple levels of accounts and trading hours. Our dedication to giving access to programming & quality confirmations ensures the best the administration for our customers

## AIM OF PPT

IT covers each phase of a securities life cycle applicable to a security token including defining a security; issuance, trading, clearing and settlement and custody and consumer protection, and impact on retail investors. **DFTC** is supportive of continued innovation in these assets and their underlying technology, and the ppt explores how the further development of these assets can potentially offer a range of benefits to market participants, which may include cost savings in settlements, increased speed of issuance and settlements, increased transparency, achieving data immutability, streamlined record keeping and data reconciliation, and the ability to program assets (i.e. smart contracts).

## Core Value

We provide our clients with data security and empower our merchants to efficiently deal with various Forex exchange concerns

Many aspects of society are not fully understood in the context of their capabilities and technological advancements; we want to transform it by supporting and demonstrating that there can be great people in the **DFTC** world who integrate the best of the Blockchain Industry for the community.

## Our Missions and vision

Our central goal is to help our Traders in making particular, determined, and maintainable enhancements in their exhibitions and to create an outstanding firm which fabricates successful speculation portfolios across globe for customers

We believe that we possibly succeed only when our customers are successful. Solving most difficult issues require the most experienced and skilled individuals who are drawn towards promising circumstances requesting answers for complex issues. We have constructed our firm around this conviction which is reflected in our main goal to make a solid association that is reliable in its presentation.

## About Us

### What is DFTC

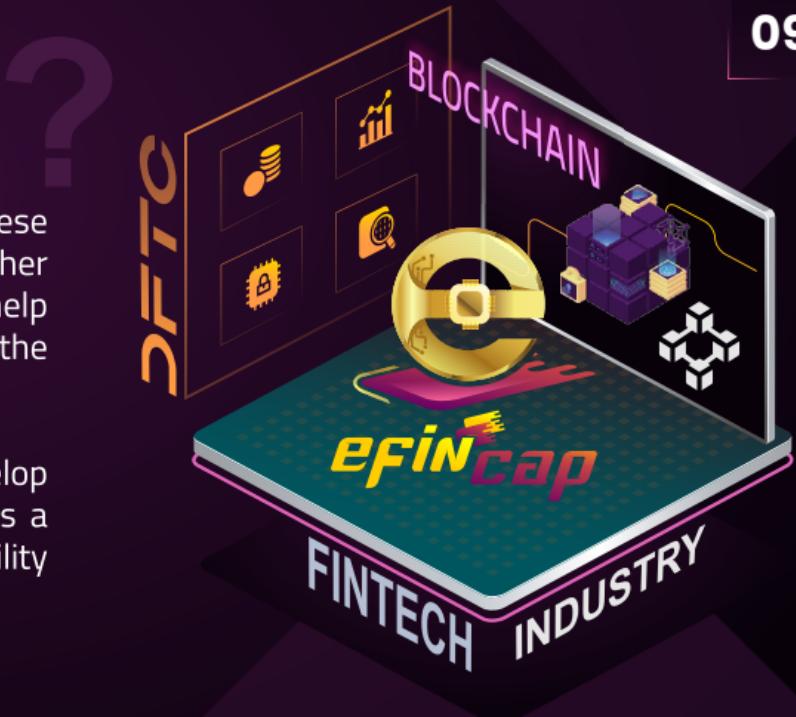

As the industry moves forward with the broader adoption of these assets and their supporting technology, DFTC believes further dialogue between industry participants and regulators will help support the further growth of the markets for the tokens and the adoption of the technology that supports them.

The capital markets are always innovating as technologies develop and the structure of the markets evolves accordingly. DFTC is a prime example of emerging technologies that may have the ability to offer new and cost-efficient methods of capital formation.

### Fintech future

financial services institutions offered a variety of services under a single umbrella. The scope of these services encompassed a broad range from traditional banking activities to mortgage and trading services. In its most basic form, Fintech unbundles these services into individual offerings. The combination of streamlined offerings with technology enables fintech companies to be more efficient and cut down on costs associated with each transaction.
